

Convert the following algorithm into a program and find its time complexity using the counter method.

```
void func(int n)
{
    if(n==1)
    {
        printf("*");
    }
    else
    {
        for(int i=1; i<=n; i++)
        {
            for(int j=1; j<=n; j++)
            {
                printf("*");
                printf("*");
                break;
            }
        }
    }
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

```
1 #include <stdio.h>
2
3 int main()
4 {
5     int n, count = 0;
6     scanf("%d", &n);
7
8     if (n == 1)
9     {
10         count = 1;
11     }
12     else
13     {
14         count = 5 * n + 2;
15     }
16
17     printf("%d", count);
18
19     return 0;
20 }
```

	Input	Expected	Got	
✓	2	12	12	✓
✓	1000	5002	5002	✓
✓	143	717	717	✓

Passed all tests! ✓

Correct
