

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
    int rev = 0, remainder;
    while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n /= 10;
    }
    print(rev);
}
```

```
1 #include <stdio.h>
2
3 void reverse(int n)
4 {
5     int rev = 0, remainder;
6     int count = 0;
7
8     while (n != 0)
9     {
10         count++;
11         remainder = n % 10;
12
13         count++;
14         rev = rev * 10 + remainder;
15
16         count++;
17         n /= 10;
18
19         count++;
20     }
21
22     count += 3;
23
24     printf("%d", count);
25 }
26
27 int main()
28 {
29     int n;
30     scanf("%d", &n);
31
32     reverse(n);
33
34     return 0;
35 }
```

	Input	Expected	Got	
✓	12	11	11	✓
